CONSULTANCY TRAINING RESEARCH

OCSRC was founded by Emma Osborn, who recently submitted her doctoral thesis to the University of Oxford Centre for Doctoral Training in Cyber Security. Throughout her doctoral project, she published research on the subjects of cyber security in SMEs, for consumers and in the broader supply chain.

Prior to this, she worked in the defence industry, in areas such as cyber security incident response.

She has brought this breadth of experience into her design of OCSRC's consultancy and training products, all aimed at helping non-experts navigate cyber security and make confident, pragmatic, decisions.

Securing Business Leaders

EMPOWERING YOU TO MAKE STRATEGIC CYBER SECURITY DECISIONS

If you're a non-technical decision maker who needs to enhance your knowledge, then OCSRC offers the support you need. We focus on teaching non-experts how to decipher cyber security requirements and jargon.

From finance to philanthropy, it's never nice to know that your role is increasingly dependent on something that feels like it's written in a foreign language. Understanding cyber security strategy is becoming as important as reading a balance sheet or analyzing reports from your team.

Whether you're worried about being accountable for decisions you don't fully understand, you're developing or evolving an in-house cyber security strategy, or you're just frustrated about the information you manage to extract from your IT support providers... we aim to empower you. Starting with the knowledge you already have, we will build on your basic understanding, building confidence and helping you to know what to ask for when you need support.

flexible training fits your learning needs

TRAINING FOR BUSINESS LEADERS

- 360° CYBER SECURITY FOR BUSINESS LEADERS
- CYBER SECURITY FOR THE BOARD
- ROUNDTABLES
- EXECUTIVE COACHING

CYBER SECURITY FOR THE BOARD

Combining a 30-minute training module covering "the things board members ought to know about cyber security" with a mixture of Q&A and 1-to-1 executive coaching. No matter your background, this is the first step towards understanding cyber security strategy.

OUNDTABLES

Want to just ask questions? You can arrange a series of Q&As based on the themes you choose.

360° CYBER SECURITY

Find it hard to tie what you've already read about cyber security to your specialism or sector? Our 360° cyber security course helps you to explore the ways you use technology to facilitate business processes and how cyber security reduces the risk of our reliance on IT.

The 2-day course focuses on cyber risk, simplifying the assessment process and building an understanding that lets you align it with your evaluation of other business risks. You should leave confident that you will be able to assess cyber risk inside of your organisation.

The 4-day course includes the risk assessment processes covered in the short course, then builds the vocabulary you need to translate your techies, get the advice you need and develop cyber security processes. The syllabus includes:

- Defining cyber security risk in a business context
- Understanding cyber security principles
- Securing for GDPR and building security business cases
- How cyber security standards shape 'best practices' and understanding the cyber security lifecycle

EXECUTIVE COACHING

OCSRC specialises in providing advice and training to non-technical decision makers and strategists using accessible language.

Sometimes those decision makers want to learn at their own speed, find out that there no silly questions without an audience, or go beyond the content we can offer in a one-day course. This gives you the freedom to adapt your training to your specific needs, to combine an understanding of strategic cyber security with an enhanced awareness of sector-specific cyber threats and to make you less vulnerable the hackers who have made you their target.

We offer 1-to-1 coaching for individuals and decision makers in any size or type of organisation.

LOOKING FOR A DIFFERENT TYPE OF TRAINING?

We also offer in-house cyber security awareness training for your employees, a DIY security review for SME owners who want to replace consultants with knowledge and coaching for techies who need to learn how to translate to non-technical managers or present business cases to the board.

INSPIRED TO IMPLEMENT SOME SECURITY?

OCSRC offers cyber security reviews and advice to small organisations and their supply chains. Because we specialise in supporting small and resource-constrained organisations we have developed products to streamline the development and documentation of your cyber security processes. Email hello@ocsrc.co.uk for details

CUSTOM SOLUTIONS

The services we offer can be adapted and combined to suit your specific needs. Training courses are currently offered in-house to groups of 4-12 people (either from your own or your partner organisations). For information about public courses, please email hello@ocsrc.co.uk
