CONSULTANCY
TRAINING
RESEARCH

OCSRC was founded by Emma Osborn, who recently submitted her doctoral thesis to the University of Oxford Centre for Doctoral Training in Cyber Security. Throughout her doctoral project, she published research on the subjects of cyber security in SMEs, for consumers and in the broader supply chain.

Prior to this, she worked in the defence industry, in areas such as cyber security incident response.

She has brought this breadth of experience into her design of OCSRC's consultancy and training products, all aimed at helping non-experts navigate cyber security and make confident, pragmatic, decisions.

**supporting business owners**
reviewing their cyber security

# Review and Improve

Both technology and cyber threats evolve rapidly, so our consultancy aims to empower decision makers, helping them to understand cyber risks well enough to evaluate them alongside their other business risks.

Whether you are starting from scratch with a cyber security policy, want to test your incident management procedures, or need to update your processes to comply with GDPR, our pragmatic mix of direct advice and decision-maker coaching aims to create business owners

and trustees who know which questions to ask and what IT solutions to look for.

With the increased requirement in GDPR for security decisions to be documented and proportionate to the risk faced by data subjects, business owners still relying on a small number of untested technical measures may find themselves exposed. OCSRC helps business owners understand their choices, giving you the confidence that if the worst happens you can justify your decisions.

## flexible support fits
## your business needs

**REVIEWING CYBER SECURITY IN SMALL ORGANISATIONS**
@CSRC

HOW DO YOUR PEOPLE USE IT… …AND HOW WILL THEY REACT IN A CYBER INCIDENT?

WHAT ARE THE THREATS TO YOUR BUSINESS?

WHAT SECURITY DO YOU ALREADY HAVE?

WHAT IT EQUIPMENT IS SUPPORTING YOUR BUSINESS…

…AND HOW DO YOU PLAN TO RECOVER IF DISASTER STRIKES?

HOW WELL HAVE YOU DOCUMENTED WHAT YOU ARE DOING?

WHAT ARE YOUR LEGAL OBLIGATIONS?

WHAT SERVICES DO YOU USE AND HOW SECURE ARE THEY?

## CONSULTANT-LED REVIEWS

If you want to just 'solve' the cyber security problem with limited effort then our consultancy can help you. We can:

• DOCUMENT YOUR CURRENT PROCESSES
• EVALUATE YOUR CYBER SECURITY RISK
• HELP YOU PRIORITISE WHICH PROBLEMS TO SOLVE
• WRITE YOUR CYBER SECURITY POLICIES
• TRAIN YOUR EMPLOYEES TO BE MORE SECURITY AWARE
• HELP YOU DEVELOP PLANS FOR WHEN THE WORST HAPPENS
• SUGGEST IMPROVEMENTS TO THE TECHNOLOGY YOU USE

## DIY SECURITY REVIEWS

Prefer to learn how to review your own security? Want the skills to be able to think over your risk each time you read something new in the press?

We offer a half-day course that will teach you the basics for reviewing your own security and prioritising your business' needs. Over an afternoon, we coach you through answering the questions that we'd normally ask during our consultancy, using examples to help you benchmark your own security against standards, companies who have reported breaches and other organisations of your size.

While it doesn't offer the same depth of knowledge as the 360° cyber security course, attendees will take home some practical skills that will let them keep an eye on their security without relying on an expert.

## DOCUMENT SECURITY

Because we specialise in supporting small and resource-constrained organisations we have developed products to streamline the development and documentation of your cyber security processes.

We offer a variety of template documents, all written with guidance to help you define your own cyber security function. These include:

• POLICY TEMPLATES
• ASSET MAPPING AND CYBER SECURITY RISK ASSESSMENT
• INCIDENT AND DISASTER RECOVERY PLANNING
